AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

LISTING OF THE CLAIMS:

1-5. (Canceled).

6. (Previously Presented) A copy-protected navigation drive system, comprising:

a drive for reading out navigation data; and

a data medium configured to store the navigation data, a pregap being present on the data medium in addition to the navigation data, where identification information is stored in a pregap of the data medium, the drive being configured to read the identification information in the pregap.

7. (Previously Presented) The navigation system as recited in claim 6, wherein the data medium is a CD-ROM.

8. (Previously Presented) The navigation system as recited in claim 6, wherein the pregap ranks above logic block address "0".

9. (Previously Presented) The navigation system as recited in claim 6, wherein a copyright note is stored in the pregap.

10. (Canceled).

11. (Previously Presented) A navigation system with copy-protected data, comprising:

a navigation data reading device;

a data medium storing navigation data, including a pregap configured to be ignored by standard duplicating equipment, during a duplicating process;

wherein the pregap includes identification information corresponding to copyright privileges or limits,

wherein the navigation data reading device includes a serial number, and

wherein the navigation data of a particular data medium is exclusively readable by a navigation data reading device having a particular serial number.

12. (Previously Presented) The navigation system of claim 11, wherein the data medium storing navigation data includes logical addressing, and wherein the logical address zero is located at an end of the pregap.

13. (Previously Presented) A computer readable medium having a computer program, which is executable by a processor, for copy-protecting a computerized navigation system, comprising:

a computer code program arrangement having program code for copy-protecting the computerized navigation system by performing the following:

receiving a data medium storing navigation data in a main portion and including a pregap storing copyright information;

checking the pregap for a condition; and

reading the navigation data if the condition is met and denying a read of the navigation data if the condition is not met.

14. (Previously Presented) The computer readable medium of claim 13, wherein the condition is met when there is a pregap and when the pregap includes copyright information.

15. (Currently Amended) The computer readable medium of claim 13, wherein [[the]] a navigation data reading device for reading the navigation data includes a serial number, and wherein the condition is met when the copyright information corresponds to a particular serial number associated with the navigation data reading device.

16. (Previously Presented) The navigation system as recited in claim 6, wherein the data medium is a CD-ROM, wherein the pregap ranks above logic block address "0", and wherein a copyright note is stored in the pregap.
